

Bootstrap Cards

In this lesson you will learn how to use Bootstrap card component.

Using the Bootstrap Cards

Bootstrap card is a flexible and extensible content container. It includes options for headers and footers, a wide variety of content, contextual background colors, and powerful display options. Card replaces panel, well, and thumbnail components in old Bootstrap 3 version.

In the following sections, you will see what you can do with the card component.

Creating a Basic Card

The card markup is pretty straight forward. The outer wrapper require the base class `.card`, whereas content can be placed inside the `.card-body` element. The following example will show you how to create a card with a picture, mixed with some text content and a button.

Example

```
<div class="card" style="width: 300px;">
  
  <div class="card-body text-center">
    <h5 class="card-title">Alice Liddel</h5>
    <p class="card-text">Alice is a freelance web designer and
      developer based in London. She is specialized in HTML5, CSS3,
      JavaScript, Bootstrap, etc.</p>
    <a href="#" class="btn btn-primary">View Profile</a>
  </div>
</div>
```

— The output of the above example will look something like this: ->next page

Alice Liddel

Alice is a freelance web designer and developer based in London. She is specialized in HTML5, CSS3, JavaScript, Bootstrap, etc.
